SAFETY PRECAUTIONS

WARNING:

The chassis of this projector is isolated (COLD) from AC line by using the converter transformer. Primary side of the converter and lamp power supply unit circuit is connected to the AC line and it is hot, which hot circuit is identified with the line () in the schematic diagram. For continued product safety and protection of personnel injury, servicing should be made with qualified personnel.

The following precautions must be observed.

- 1: An isolation transformer should be connected in the power line between the projector and the AC line before any service is performed on the projector.
- 2: Comply with all caution and safety-related notes provided on the cabinet back, cabinet bottom, inside the cabinet or on the chassis.
- 3: When replacing a chassis in the cabinet, always be certain that all the protective devices are installed properly, such as, control knobs, adjustment covers or shields, barriers, etc.

DO NOT OPERATE THIS PROJECTOR WITHOUT THE PROTECTIVE SHIELD IN POSITION AND PROPERLY SECURED.

4: Before replacing the cabinet cover, thoroughly inspect the inside of the cabinet to see that no stray parts or tools have been left inside.

Before returning any projector to the customer, the service personnel must be sure it is completely safe to operate without danger of electric shock.

PRODUCT SAFETY NOTICE

Product safety should be considered when a component replacement is made in any area of the projector. Components indicated by mark \triangle in the parts list and the schematic diagram designate components in which safety can be of special significance. It is, therefore, particularly recommended that the replacement of there parts must be made by exactly the same parts.

SERVICE PERSONNEL WARNING

Eye damage may result from directly viewing the light produced by the Lamp used in this equipment. Always turn off Lamp before opening cover. The Ultraviolet radiation eye protection required during this servicing.

Never turn the power on without the lamp to avoid electric-shock or damage of the devices since the stabilizer generates high voltages(15kV - 25kV) at its starts.

Since the lamp is very high temperature during units operation replacement of the lamp should be done at least 45 minutes after the power has been turned off, to allow the lamp cool-off.

DO NOT ATTEMPT TO SERVICING THE REMOTE CONTROL UNIT.

Laser Beam may be leaked out when in disassemble the Unit. As the Laser Beam used in this Remote control unit is harmful to the eyes.

Circuit Protections

This projector is equipped with the following circuit protections to operate in safety. If the abnormality occurs inside the projector, it will automatically turn off by operating one of the following protection circuits.

Fuse

The fuse is located inside the projector. When the Mains switch on the rear panel is turned on and the lamp indicator does not illuminate, fuse may be open. Remove the AV board ass'y by following below and check the fuse.

It should be used the specified fuse as follows;

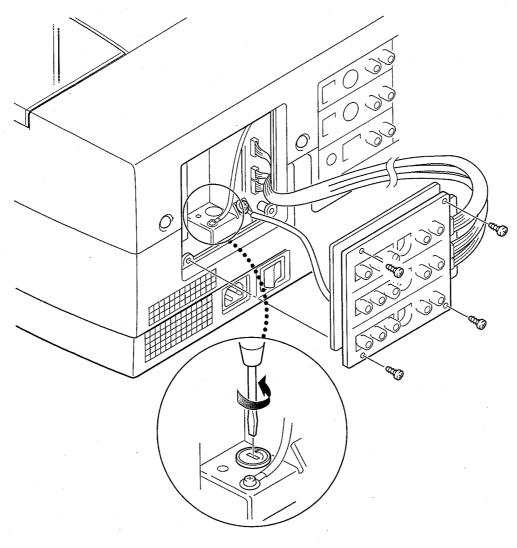

Fuse Part No.: 423 025 1201 TYPE T8.0AH 250V FUSE

LITTLE FUSE INC. TYPE 215008

How to replace the fuse

1. Remove 4 screws and pull out the AV Jack board ass'y.

2. Insert slot screwdriver into a globe of the fuse holder, then push and turn the screwdriver in the arrow direction. To install the fuse, take reversed step in the above.

Warning temperature and power failure protection

The TEMP WARNING indicator flashes red and the projector will automatically turn off when the internal temperature of the projector exceeds the normal temperature or when stopping cooling fans or when the internal power supply lines are failed.

Check the following possible causes and wait until stopping the TEMP WARNING indicator flashing.

Possible causes

- Air filter is clogged with dust particles. Remove dust from the air filter by following instructions in the "Air filter care and cleaning" below.
- Ventilation slots of the projector are blocked. In such an event, reposition the projector so that ventilation slots are not obstructed.
- Check if projector is used at higher temperature place (Normal operating temperature is 5 to 35 °C)

If the TEMP WARNING indicator still continues to flash, there may be defects on cooling fans or power supply circuits. Please check fan operation and power supply lines referring to the "Power Supply Lines Chart".

Air Filter care and cleaning

The removable air filter prevents dust from accumulation on the surface of the projection lens and projection mirror. Should be the air filter become clogged with dust particles, it will reduce the cooling fan's effectiveness and may result in internal heat build up and reduce the life of the projector.

To clean up the air filter, follow the cleaning procedure below:

- 1. Turn the MAINS ON/OFF switch to OFF, and disconnect the AC power code from the AC outlet.
- Remove the air filter cover.Press the cover latch sideway and lift the cover.
- 3. Remove the air filter and sponge from the filter cover.
- 4. Clean the air filter with a vacuum cleaner.
- Replace the air filter and sponge. Make sure that air filter cover is fully inserted.

CAUTION:

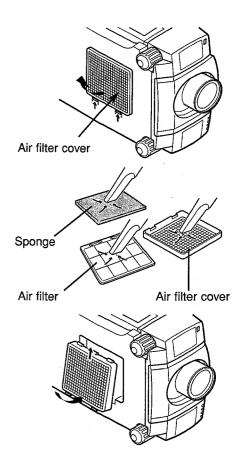

Do not clean with water. Doing so may damage the air filter. Do not operate the projector with air filter removed.

RECOMMENDATION

We recommend to avoid dusty, smoky place for operating the projector. Using in dusty place may cause the picture of poor quality.

When using under the dusty or smoky conditions, dust may accumulate on the LCD panel and lens inside it, and may resultantly be projected on the screen together with the picture.

When the above symptoms are noticed, please clean up the LCD panel and lens following to the "Cleaning Method".

Mechanical Disassemblies

Mechanical disassemble should be made following procedures in numerical order. Following steps show the basic procedures, therefore unnecessary step may be ignored.

Caution:

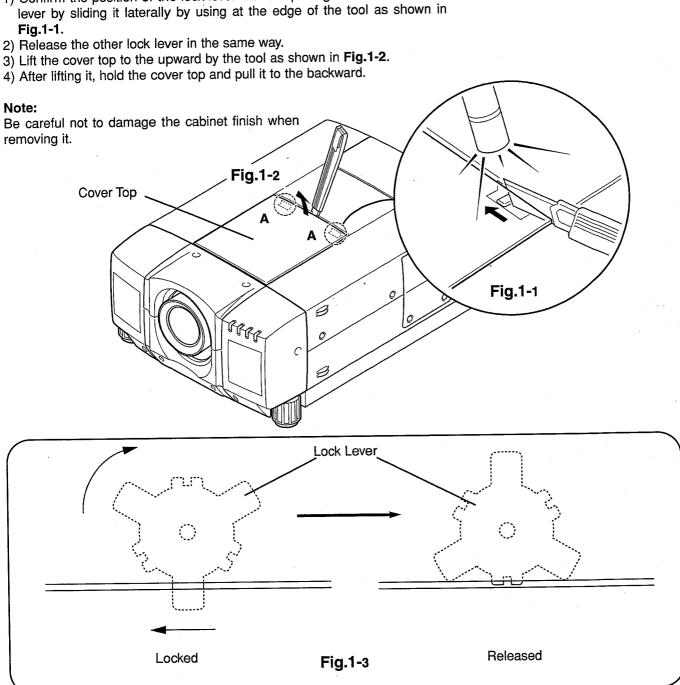

The parts and screws should be placed exactly the same position as the original otherwise it may cause loss of performance and product safety.

Lamp Replacement

WARNING:

Service Parts No.: 610 280 4225

- For continued safety, replace with a lamp assembly of the same type. Description: Lamp Assy (POA-LMP20J)

- Allow the projector to cool for at least 45 minutes before you open the lamp cover. The inside of the projector can become very hot.

- Do not drop the lamp module or touch the glass bulb! The glass can shat-

ter and cause injury.

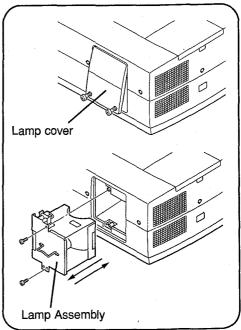

Procedure

- 1. Turn off the projector and allow the projector to cool thoroughly.
- 2. Disconnect the AC cord from the projector.
- 3. Loose 2 screws with a screwdriver and remove the lamp cover.
- 4. Remove 2 screws and pull out the lamp assembly by grasping the handle.
- 5. Replace the lamp assembly securely and tighten 2 screws.
- 6. Place the lamp cover and tighten 2 screws.
- 7. Connect the AC cord to the projector.

8. Reset the lamp replacement monitor timer, see below explanation.

Note:

- Do not reset the LAMP REPLACEMENT MONITOR TIMER, except after the lamp is replaced.
- The projector can not be turned-on with the lamp cover removed, because when the lamp cover is removed, the interlock switch is also released to switch off the mains power for safety.

How to reset the lamp replacement monitor timer

- 1. Turn the projector on. Press the **MENU** button on the projector and display menu bar. Select setting menu and select "Lamp age" on the setting menu of menu bar
- 2. "Lamp replace monitor Reset?" is displayed for confirmation. Select "Yes" to reset the lamp replace timer.

Please refer to the owners manual for further information.

Recommendation

Should the air filter become clogged with dust particles, it will reduce the cooling fan's effectiveness and may result in internal heat build up and short lamp life. We recommend cleaning the air filter after the projection lamp is replaced.

Refer to "Air Filter Cleaning".

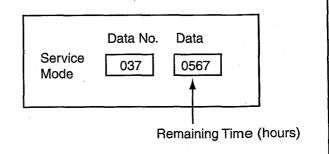

How to check the lamp life remaing time

The LAMP REPLACE indicator will illuminate and the LAMP REPLACE warning message will appear on the screen when the total illumination time of lamp reaches to the specified hours. These are to indicate that lamp replacement is necessary.

You can check the lamp life remaining time by following procedure.

- Press and hold the pointer button for more than 20 seconds. The service mode window will be displayed on the screen as shown right.
- 2. You can see the lamp life remaining time. For example: "0567" means 567 hours remaining.

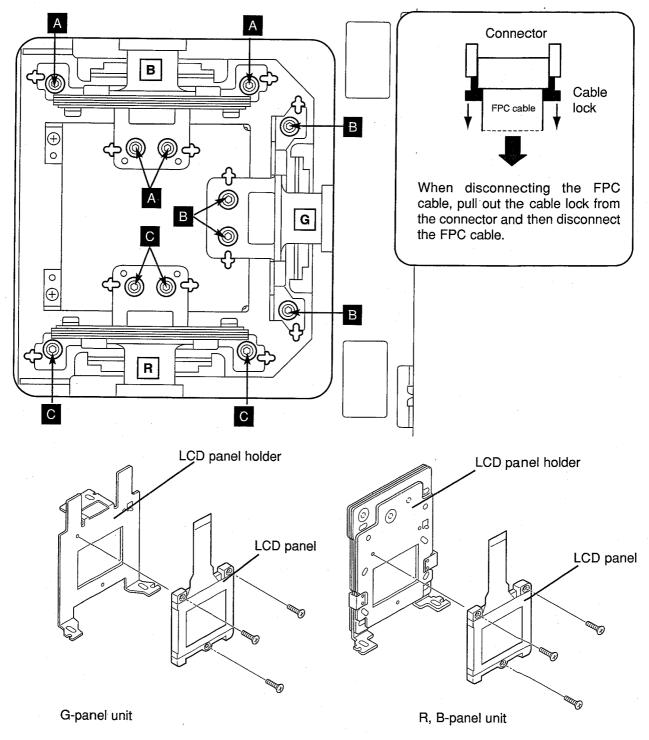

3. Press the **POWER ON-OFF** button to quit the service mode.

■ LCD Panel Replacement

- 1. Remove the cabinet cover following to step 1 of "Mechanical Disassemblies".
- 2. Remove the FPC cable on the main board.
- 3. Remove 4 screws(A) for B-Panel, 4 screws(B) for G-Panel and 4 screws(C) for R-Panel and pull the each LCD panel upward.
- 4. Remove 3 screws to take off the LCD panel from the panel holder.

When the LCD panel is replaced, it is required to re-adjust the white balance, focus, convergence and common center adjustments, and white uniformity adjustment if required. (Refer to the Optical and electrical adjustment.)

Service Adjustment Menu Operation

To enter the service mode

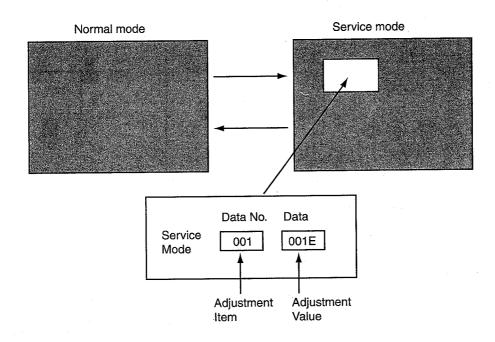

To enter the "Service Mode", press the MENU and NORMAL button on the projector and hold for 3 seconds.

To adjust service data

Select the adjustment item by pressing the pointer ⊙ or ⊙ button, and change the value by pressing the **VOL-UME** ⊕ or **VOLUME** ⊙ button. Refer to the service adjustment data table on next page for further information.

To return to the normal mode

To return to the "Normal mode", press the **POWER ON-OFF** button on the projector or remote control unit.

Memory IC Replacement

IC806 and IC807 store the data for the service adjustments, and should not be replaced except for the case of defective product.

If replaced, it should be performed the re-adjustments following to the "Electrical Adjustments".

IC806 stores the data for the white uniformity compensation adjustment. IC807 stores the data for all service adjustments without IC806 stored.

The lamp life remaining time is stored in the IC807, and it can be confirmed at the data no. 37 of service mode. Please note that the lamp life remaining time is reset to the default value when the memory IC (IC807) is replaced.

(Lamp life remaining time can not be set to the previous value.)

Caution to memory IC replacement

When IC806 or IC807 is replaced with new one, the CPU writes down the default data of the service adjustments to the ICs, refer to the service adjustment table.

As these data are not the same data as factory shipped data, it should be required to perform the re-adjustments following to the "Electrical Adjustments".

Please note that the lamp life remaining time is reset to the default value.

Caution of Main Board replacement (in the case IC806 or IC807 is not damaged)

When the main board is replaced, IC806 and IC807 should be replaced with the one on previous main board. After replacement, it should be required to perform the re-adjustments following to the "Electrical Adjustments".

In this case, the lamp life remaining time and the white uniformity compensation data can be kept the value as before.

● Service Adjustment Data Table

The initial value is the reference data writing to the memory IC by the CPU ROM when the memory IC replacing. The Adjustment item which is indicated with "*" is required to readjusted in the "Electrical adjustments". Other items should be used in the initial data value.

- 3. Insert paper etc. in Red and Green panel to block the red and green light so that only blue light is projected.
- 4. Loosen the 4 screws "C" with the 2.0mm hex driver, see Fig.1c.
- 5. Insert the slot type screwdriver in the slots ①, ②,③ and ④ (Fig.1c) and gently turn the screwdriver until the each corner of screen is in sharp focus. The relation of adjustment points and screen corners are indicated with ①, ②, ③ and ④ shown in Fig.1c and Fig.2.
- 6. Tighten the 4 screws "C" and securely attache the Blue panel unit.

CONVERGENCE ADJUSTMENT

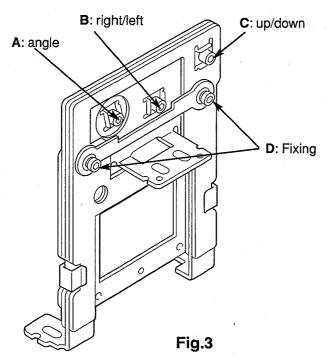

For convergence adjustment, use Green as the reference standard. Align Red and Blue with Green by adjusting the position and angle of the Red and Blue LCD panels. Screws "A", "B", "C" (Fig.3) are for convergence adjustment.

[Before adjustment]

- Make sure each Red, Green and Blue LCD panel unit has been correctly installed, and that all focus adjustments have been completed before performing convergence adjustments.
- Input a grid pattern signal.
- Adjustment requires a 2.5mm hex wrench and a slot screwdriver. Remove cabinet cover following to "Mechanical Disassemblies".

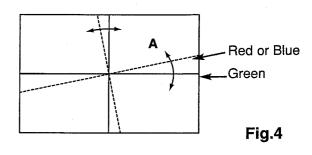

RED/BLUE PANEL CONVERGENCE

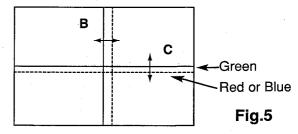

- Insert paper etc. in Red or Blue panel to block the red or blue light so that either green and red or green and blue lights are projected. (For example, when adjust Red panel convergence, project green and red lights, and when adjust Blue panel, project green and blue lights.)
- 2. Loosen 2 screws "D" (Fig.3) using the 2.5mm wrench.
- 3. Turning the screw "A", align so that the Red (or Blue) horizontal lines are parallel to the Green horizontal lines (Fig.4).
- 4. Turning screw "B", align the Red (or Blue) vertical lines onto the Green vertical lines (Fig.5).
- 5. Turning screw "C", align the Red (or Blue) horizontal lines onto the Green horizontal lines (Fig.5).
- 6. By repeating steps 3 to 5, align the Red (or Blue) grid lines onto the green lines.
- 7. Tighten the 2 screws "D" to fix the Red (or Blue) panel unit.

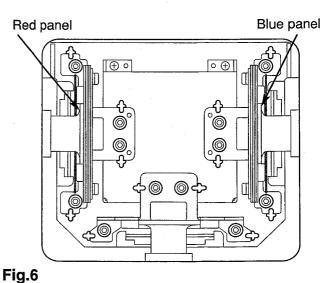

[Image Movement and Screw Turning

- 1. Adjustment screw "A" turns the image (Fig.5).
- 2. Adjustment screw "B" moves the image right and left (Fig.6).
- 3. Adjustment screw "C" moves the image up and down (Fig.6).

CONTRAST ADJUSTMENT

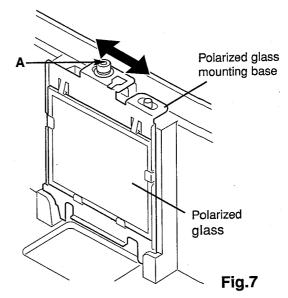

[Before Adjustment]

- Adjustment requires a 2.0mm hex driver.
- Remove cabinet cover following to step1 of "Mechanical Disassemblies".
- Input a 100% of black raster signal.

[R/G/B-CONTRAST ADJUSTMENT]

- 1. Insert paper etc. in front of the LCD panels to block unnecessary lights.
 - When adjusting the R-Contrast, project red light only. When adjusting the G-Contrast, project green light only. When adjusting the B-Contrast, project blue light only.
- 2. Loosen a screw "A" (Fig.7/8) on the polarized glass mounting base which you intend to adjust.
- 3. Turn the polarized glass mounting base as shown in Fig.7 to obtain the darkest brightness on the screen.
- 4. Tighten the screw "A" to fix the polarized glass mounting base.

Repeat steps 1 to 4 for remaining polarized glasses.

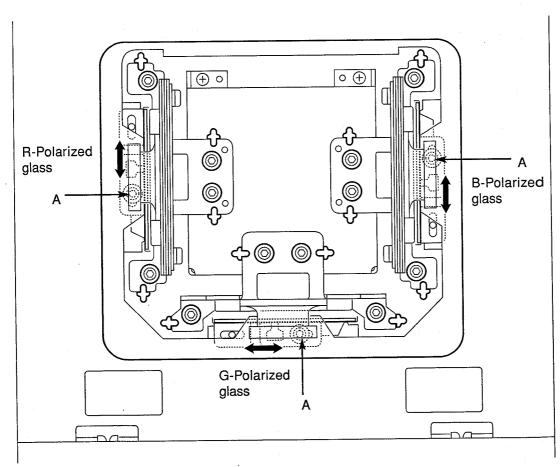

Fig.8

INTEGRATOR LENS ADJUSTMENT

[Before Adjustment]

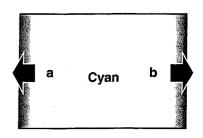

- Adjustment requires a 2.0mm hex driver and a slot screwdriver.
- Remove cabinet top and cabinet front following to "Cabinet Disassemblies". The lamp cover must be re-mounted otherwise the projector can not be turned on.
- Disconnect the connectors FPC cable of LCD panels on the main unit.

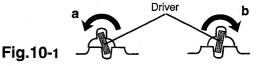

[ADJUSTMENT]

- 1. Turn on lamp by a state of without FPC cable of LCD panels.
- 2. Set the size of a screen in about 40 inches.
- 3. Insert paper etc. in Red and Blue panel to block the red and blue light so that green light is projected and make a fine focus.
- 4. Insert paper etc. in Red panel to block the red light so that blue and green lights are projected.
- 5. Adjust the adjustment base of integrator lens ass'y to make color uniformity in cyan.
 - 1) If the un-uniform color appears on the left or right of the screen as shown in **Fig.10-1**, loosen 2 screws "B" with the hex driver (**Fig.9**) and adjust a slot "A" to make color uniformity in cyan by using a slot screwdriver.
 - 2) If the un-uniform color appears on the top or bottom of the screen as shown in Fig.10-2, loosen 2 screws "C" with hex driver (Fig.9) and adjust the 2 screws "D" to make color uniformity in cyan.
- 6. Tighten the 4 screws "B" and "C" to fix the integrator lens unit.

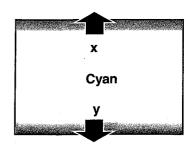

Note:

The relay lens adjustment must be carried out after completing this adjustment.

- Disconnect the connectors K1A, K8C, K2R, K2G, K2B and FPC cable of LCD panels on the main unit.
- Remove temperature sensor (SW904) on the prism ass'y.

Note: Do not disconnect connector "K8E" (Temperature sensor) otherwise the projector can not be turned on.

[ADJUSTMENT]

- 1. Turn on lamp by a state of without FPC cable of LCD panels.

Cleaning

After long periods of use, dust and other particles will accumulate on the LCD panel, prism, mirror, polarized glass, lens, etc., causing the picture to darken or color to blur. If this occurs, clean the inside of optical unit.

Remove dust and other particles using air spray. If dirt cannot be removed by air spray, disassemble and clean the optical unit.

Cleaning with air spray

- 1. Remove the cabinet cover following to step 1 of "Mechanical Disassemblies".
- 2. Clean up the LCD panel and polarizing plate by using the air spray from the cabinet top opening.

Caution:

Use a commercial (inert gas) air spray designed for cleaning camera and computer equipment. Use a resinbased nozzle only. Be vary careful not to damage optical parts with the nozzle tip. Never use any kind of cleanser on the unit. Also, never use abrasive materials on the unit as this may cause irreparable damage.

Disassembly Cleaning

Disassembly cleaning method should only be performed when the unit is considerable dirty and cannot be sufficiently cleaned by air spraying alone.

Be sure to readjust the optical system after performing disassembly cleaning.

- 1. Remove the cabinet top and main unit following to step 2 to 3 of "Mechanical Disassemblies".
- Remove integrator lens unit and relay lens unit, and then the optical base top following step 2 of "Optical Unit Disassemblies". If the LCD panel needs cleaning, remove the LCD panel unit following to "LCD panel replacement".
- Clean the optical parts with a soft cloth. Clean extremely dirty areas using a cloth moistened with alcohol.

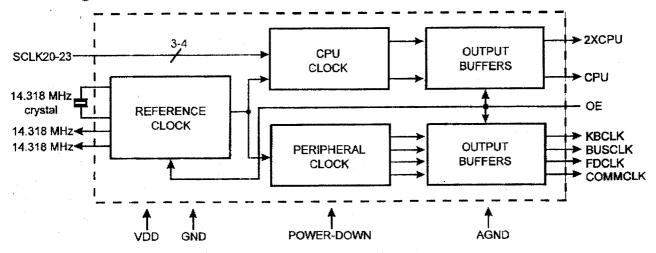

Caution:

The surface of the optical components consists of multiple dielectric layers with varying degrees of refraction. Never use organic solvents (thinner, etc.) or any kind of cleanser on these components.

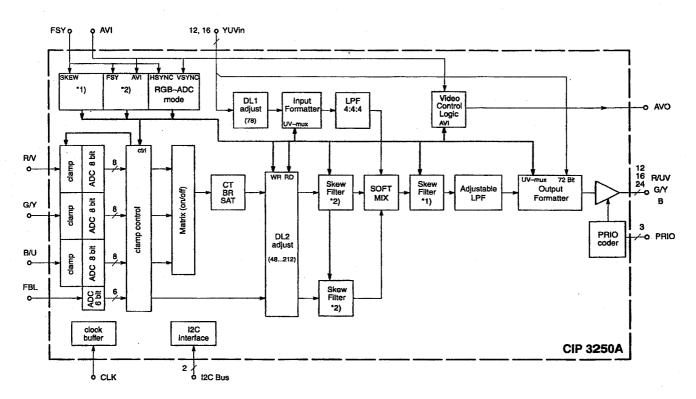

Since the LCD panel is equipped with an electronic circuit, never use any liquids (water, etc.) to clean the unit. Use of liquid may cause the unit to malfunction.
